Have successfully completed the given task for the topic.

Introduction

The thirst for learning, upgrading technical skills and applying the concepts in real life environment at a fast pace is what the industry demands from IT professionals today. However busy work schedules, far-flung locations, unavailability of convenient time-slots poses as major barriers when it comes to applying the concepts into realism. And hence the need to look for alternative means of implementation in the form of *laddered* approach.

The above truly pose as constraints especially for our students too! With their busy schedules, it is indeed difficult for our students to keep up with the genuine and constant need for integrated application which can be seen live specially so in the field of IT education where technology can change on the spur of a moment. Well, technology does come to our rescue at such times!!

Keeping the above in mind and in tune with our constant endeavour to use technology in our training model, we at Aptech have thought of revolutionizing the way our students learn and implement the concepts using tools themselves by providing a live and synchronous eProject learning environment!

So what is this eProject?

eProject is a step-by-step learning environment that closely simulates the classroom and Lab based learning environment into actual implementation. It is a project implementation right at your fingertips!! An electronic, live juncture on the machine that allows you to:

- Practice step by step i.e laddered approach.
- Build a larger more robust application.
- Usage of certain utilities in applications designed by user.
- Single program to unified code leading to a complete application.
- Learn implementation of concepts in a phased manner.
- Enhance skills and add value.
- Work on real life projects.
- Give a real life scenario and help to create applications more complicated and useful.

- Mentoring through email support.
- The students at the centre are expected to complete this eProject and send complete project along with the documentation to eProjects Team

Objectives of the project

- The Objective of this program is to give a sample project to work on real life projects. These applications help you build a larger more robust application.
- The objective is not to teach you JavaScript/Dreamweaver but to provide you with a real life scenario and help you create basic applications using the tools.
- You can revise the chapters before you start with the project.
- This project is meant for students who have completed the module of Dreamweaver. These programs should be done in the Lab sessions with assistance of the faculty if required.
- It is very essential that a student has a clear understanding of the subject. Students should go through the project and solve the assignments as per requirements given.
- Kindly get back to eProjects Team in case of any doubts regarding the application or its objectives.

Problem Statement

Theatre show: Theatre show.com is a website used to provide information about various theatre shows going on and where. The theatre.com represents the information all the theatre events of events various languages. Various Famous theatre artist details must also be included in the application.

Requirement Specification:

The Web site is to be created based on the following requirements.

1. The home page must be designed with beautiful color combination with all the required links defined properly. Also all the section of the webpage must be in Hindi to avoid the blank space.
2. It includes details like Urdu Theatre Shows, Hindi Theatre shows, English Theatre show, Auditorium, Theatre Speak, Artist Gallery, Upcoming shows, Details of venue of current and upcoming shows.
3. Some awards details must be included in the application.
4. Navigation of the project must be made smooth.
5. Theatre speaks: must represent details of reviews of shows.
6. Auditoriums: The list of the auditoriums where events take place.
7. Upcoming events: List of upcoming events.
8. Magazines: Related Magazines must be included.
9. Uniformity in the designing must be maintained.
10. Gallery section of artist must be included in the application.
11. Feedback can be included.
12. Queries can be included.

Home Page

The theatre website landing page is designed to create an engaging first impression by combining clear navigation, visual elements, and organized content. The layout focuses on ease of use while highlighting theatrical performances in an attractive and professional manner.

The **navigation bar** at the top allows smooth movement across the website and includes:

- A theatre logo linked to the homepage
- Main menu links such as Home, About Us, and Contact Us
- A “More” dropdown containing Auditorium, Magazines, and Theatre Show
- A search bar for quick content access

Below the navigation, a **video section** adds visual impact and sets a dramatic theatre atmosphere through an autoplaying promotional video, helping to capture user attention instantly.

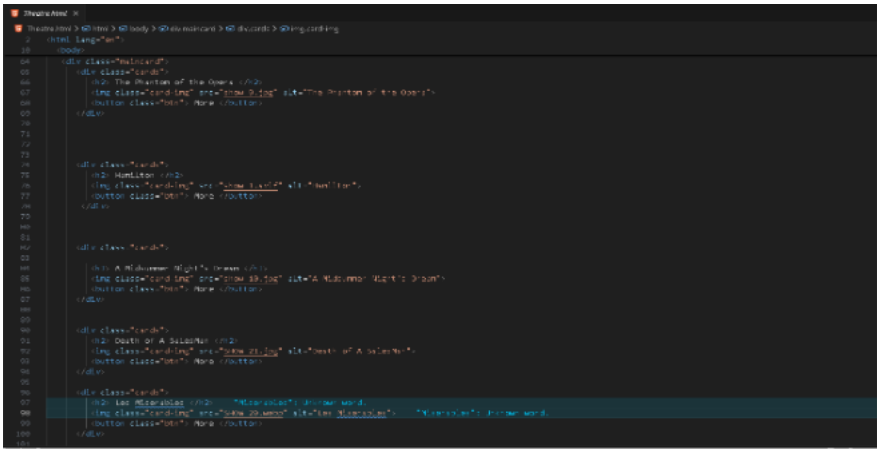
The **main content section** displays featured theatre shows in a card layout. Each card includes:

- Show title
- Show image
- A “More” button for further details

The featured productions include popular and classic plays such as The Phantom of the Opera, Hamilton, A Midsummer Night’s Dream, Death of a Salesman, Les Misérables, and The Mousetrap.

The page ends with a **footer section** that provides important information and navigation support, including contact details, branding, social media links, useful page links, a subscription form, and copyright information. Overall, the landing page presents a complete, visually appealing, and user-friendly theatre website experience.

Gallery Section



Each individual **card** is designed to highlight a single theatre show and follows a uniform format for easy recognition and readability. Every card includes:

- The title of the theatre production, displayed prominently using heading elements

- An image related to the show, giving users a visual representation of the performance
- A “More” button that encourages users to explore additional information about the selected show

The section features a curated selection of well-known theatrical productions, including:

- The Phantom of the Opera
- Hamilton
- A Midsummer Night’s Dream
- Death of a Salesman
- Les Misérables
- The Mousetrap

This card-based layout allows users to quickly browse through multiple shows while maintaining visual balance and clarity. By combining text, imagery, and interactive buttons, the section effectively presents featured theatre performances in a clean, engaging, and user-friendly manner, making it easy for visitors to discover and explore different productions available on the platform.

Footer

THEATER
Follow us

At the top of the footer, a **call-to-action (CTA) area** displays key contact information in a three-column layout. This section allows visitors to quickly locate important details and includes:

- A location block showing the physical address of the theatre
- A contact block displaying a phone number for direct communication
- An email block providing an official mailing address
  Each block is supported by an icon and a short heading to improve visual clarity and recognition.

Below the CTA section, the **main footer content area** is divided into three columns. The first column focuses on branding and social presence and contains:

- The theatre logo linked to the homepage
- A short descriptive paragraph about the organization
- Social media icons encouraging users to follow the theatre on different platforms

The second column presents a **Useful Links** section, which organizes multiple internal navigation links in a list format. These links help users quickly access important pages such as home, services, portfolio, team, and contact-related pages, improving overall site navigation.

The third column is dedicated to **user engagement** through a subscription feature. It includes:

- A brief message encouraging visitors to subscribe
- An email input field for newsletter sign-ups
- A submit button represented by an icon to complete the subscription action

At the very bottom of the footer, the **copyright area** provides legal and informational details. This section displays copyright ownership information along with a credited link and includes an additional footer menu containing links to terms, privacy, policy, and contact pages. Overall, this footer section completes the webpage with a professional, informative, and user-friendly design that supports communication, navigation, and ongoing user interaction.

```

The given code represents a **Frequently Asked Questions (FAQ) section** designed to provide quick and clear answers to common user queries in an organized and user-friendly layout. This section helps improve user understanding and builds trust by addressing typical concerns directly on the webpage.

At the top of the section, a **centered heading** labeled "FAQ" clearly introduces the purpose of the content, followed by a short descriptive line that informs users that the section contains answers to commonly asked questions. This introductory text helps set expectations and encourages users to explore the information provided.

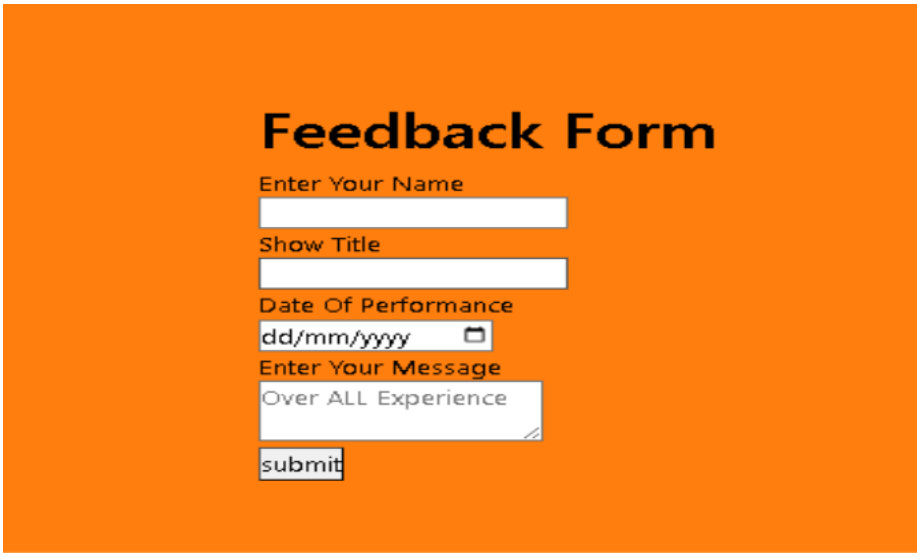
Below the heading, the FAQ content is arranged using a **responsive grid layout** divided into multiple columns. Each FAQ item is placed within its own block, allowing questions and answers to be displayed neatly across different screen sizes. Every FAQ block includes:

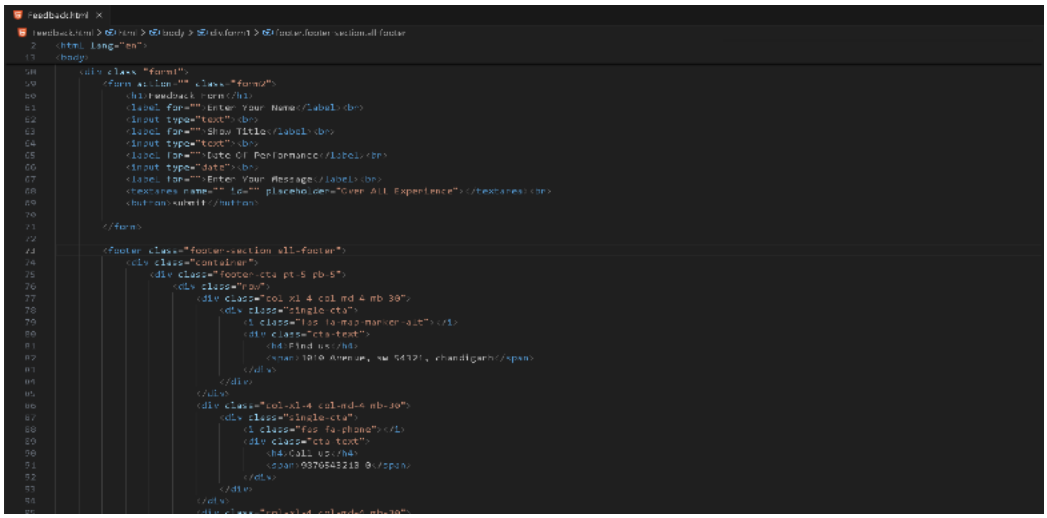
- A question displayed as a highlighted heading
- An accompanying icon to visually represent the question and enhance readability
- A short descriptive answer written in paragraph form

The questions vary in length and content, covering topics such as account security, subscription management, billing updates, refunds, and available plans. Some answers emphasize key points using bold and underlined text to draw attention to important information, making the content easier to scan and understand.

Overall, this FAQ section provides a clean and structured way to address user concerns, improves the overall user experience by reducing confusion, and adds informational value to the website by clearly communicating policies and service details in an accessible format.

FeedBack Form





The provided code defines a **feedback form section** that allows users to share their opinions and experiences related to theatre performances. This section is designed to collect user input in a simple and structured manner, making it easy for visitors to provide meaningful feedback.

The form begins with a clear **heading titled "Feedback Form"**, which informs users about the purpose of the section. Below the heading, the form presents a series of labeled input fields that guide users step by step through the feedback process. These fields include:

- A text input for entering the user's name
- A text input for specifying the title of the theatre show
- A date input for selecting the date of the performance attended
- A text area for writing a detailed message about the overall experience

Each input field is preceded by a descriptive label, ensuring clarity and ease of use. Line breaks are used to keep the layout clean and vertically aligned, allowing users to fill out the form comfortably. At the end of the form, a **submit button** is provided to send the entered information.

Overall, this feedback form section enhances user interaction by encouraging visitors to share their thoughts and experiences. It supports user engagement, helps gather valuable insights, and adds an interactive element to the theatre website by allowing direct communication between the audience and the platform.

[Thank YOU]
